

Management intervention in a non-intervention area of a national park core zone:

YES or NO???

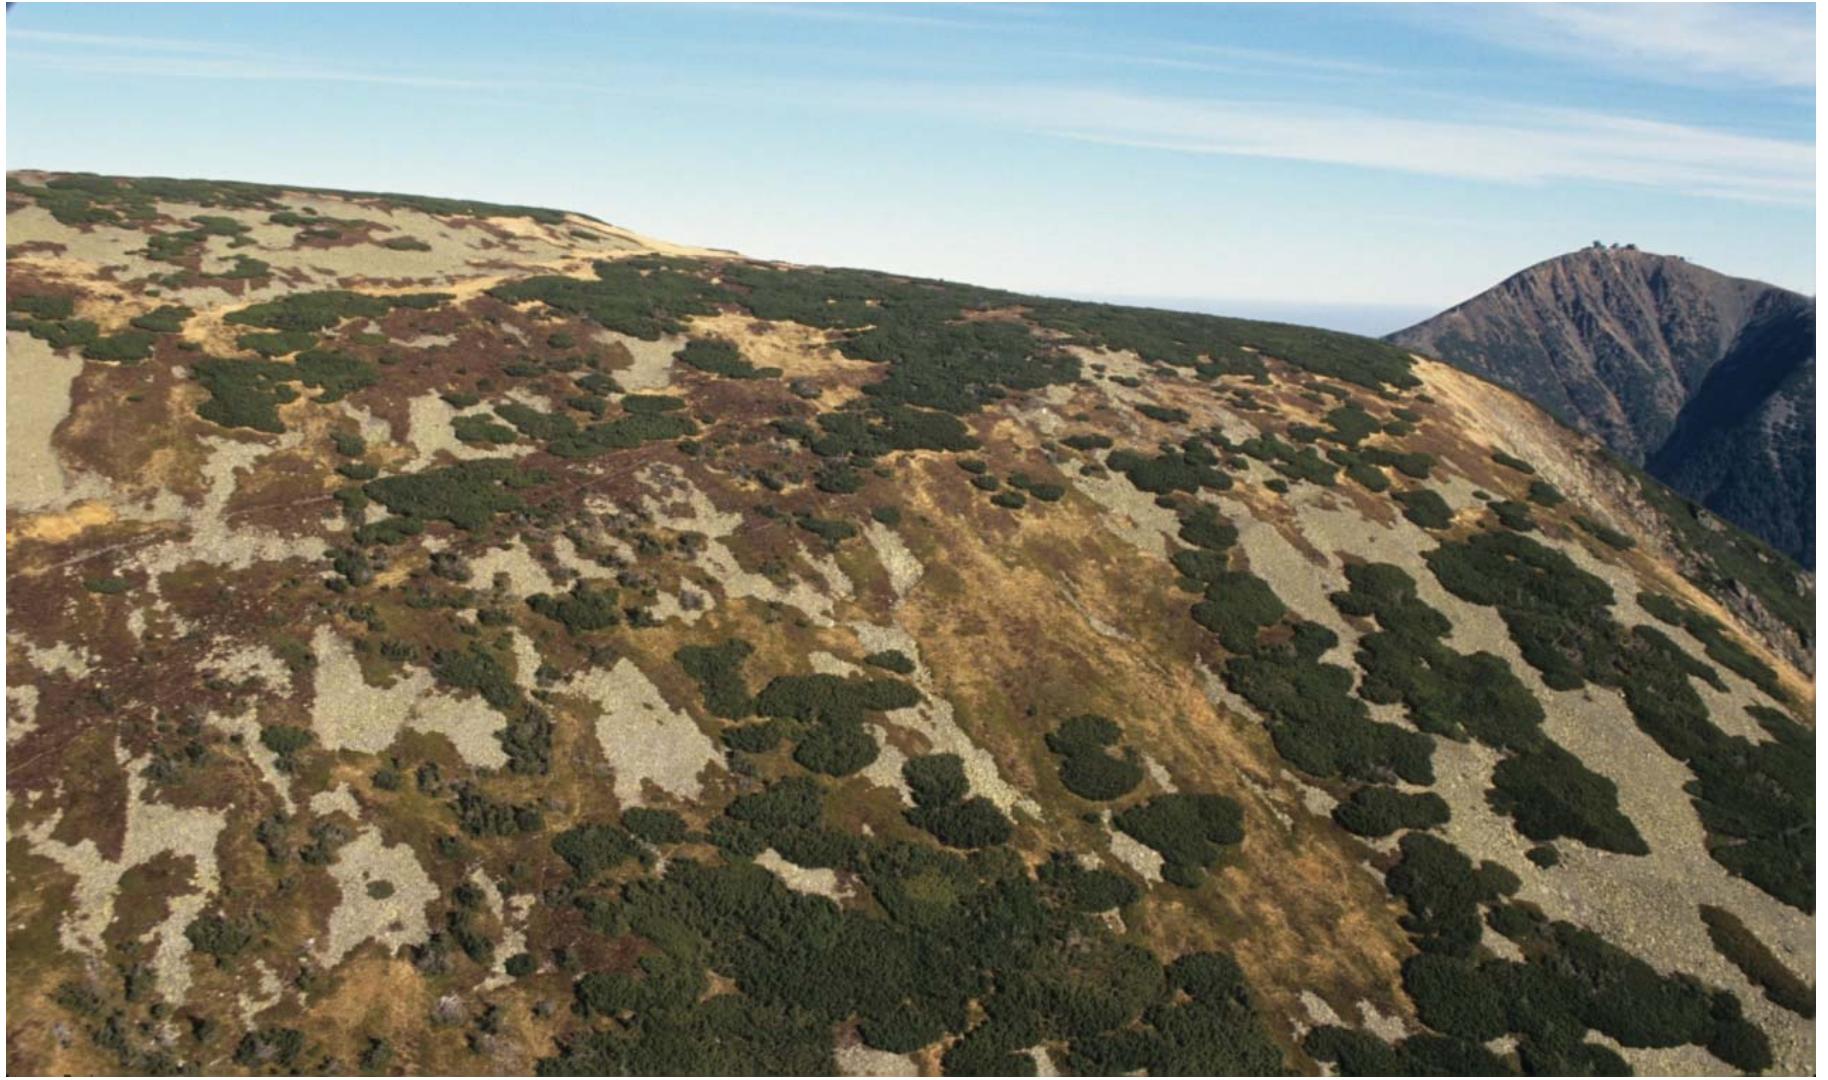

Jan Materna

Department of Nature Conservation
The Krkonoše Mts. National Park Administration

Case study from the Krkonoše Mts. national park

Subalpine belt (1250-1450 m a.s.l.)

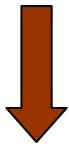

**Intensive dwarf pine planting in the Krkonoše Mts:
1887-1916 (261 ha) and 1966-1992 (292 ha)**

Potential negative impact on:

- temperature and humidity regime
- wind and snow activity

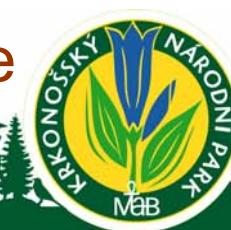

- vegetation cover
- intensity of cryogenic processes

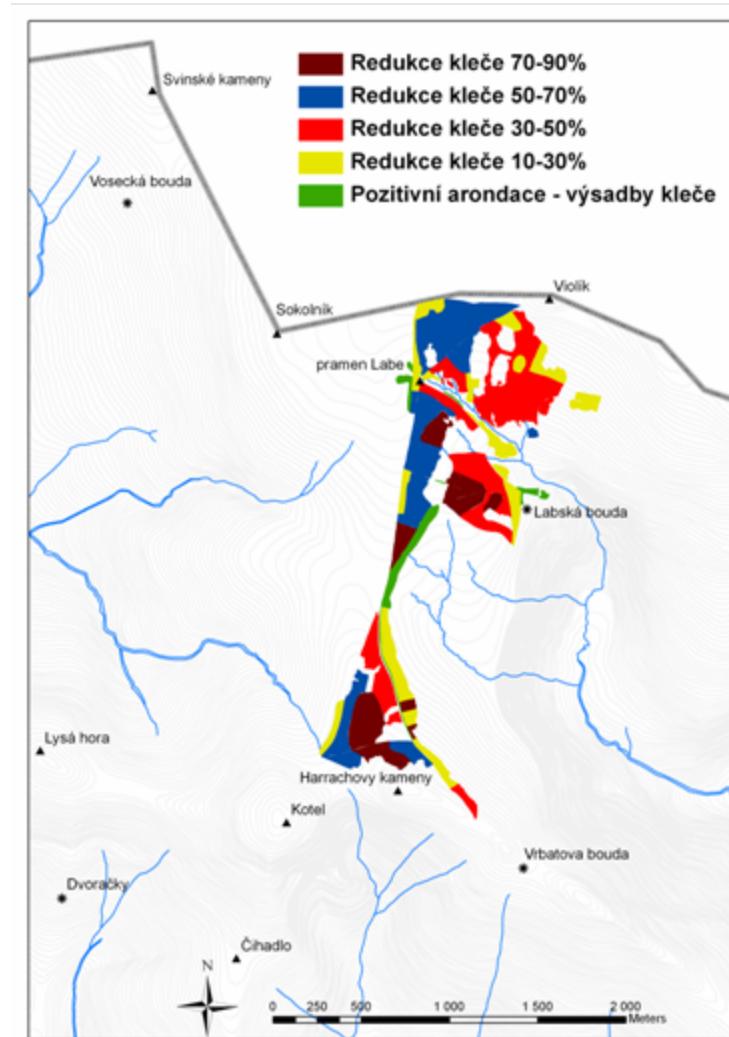

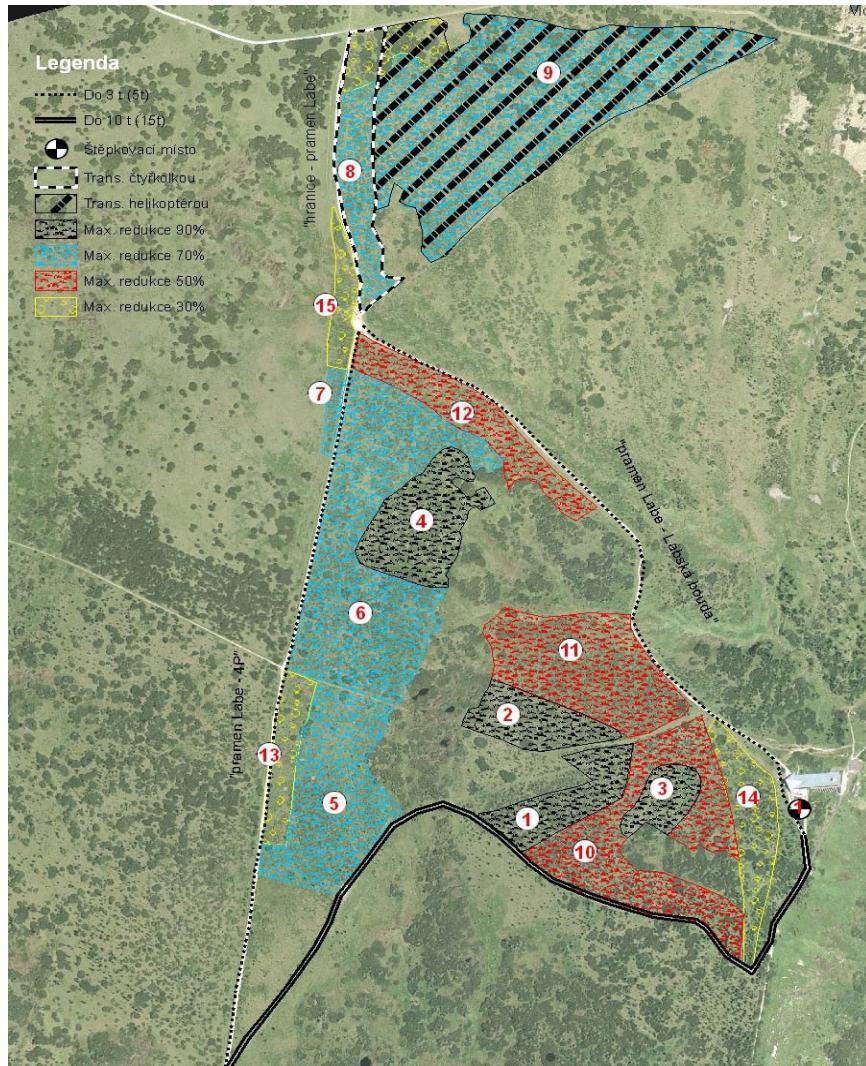

Intensive research of dwarf pine ecosystems (1993-1999)

**26 papers were published in Yearbook
of Scientific papers from the Krkonoše NP
in 2001 and 2002, dealing with:**

- vegetation history (palaeoecological research)
- vegetation dynamic in dwarf pine ecosystems
- site and stands condition of dwarf pine stands
- interactions between dwarf pine and grassland vegetation
- microclimatic relationships
- frost phenomena in relation to dwarf pine
- soil development in dwarf pine (subalpine) zone

Management plan of dwarf pine plantations reduction

Pilot project in 2010

Pilot project in 2010

Pilot project in 2010

Pilot project in 2010

- reduction on 38 ha
- 1000 t of a dwarf pine biomass removed
- costs: 250.000 Euro

Future plans - reduction on 142 ha

Thank you for your attention!

I am grateful to my colleagues from the Department of Nature Protection
- Jan Vaněk , Tomáš Janata and Josef Harčarik,
for providing me with photos and management plan.
